

OSINT INVESTIGATION & INTELLIGENCE GATHERING

Professional Intelligence Report

Cryptonic Area — Cyber Security & Ethical Hacking Virtual Internship · Project 02 (OSINT)

Prepared by: Jasper I. Talangan

Target: <https://www.chicken-road2.app/>

Date of Report: July 27, 2026

1. Executive Summary

This report documents an Open Source Intelligence (OSINT) investigation of the target website <https://www.chicken-road2.app/>, conducted using publicly available domain intelligence tools and direct inspection of the live site. The investigation gathered domain, hosting, SSL, and technology information, and assessed the site for security-relevant observations.

The target is an informational/affiliate marketing website promoting “Chicken Road 2,” a casino mini-game produced by InOut Games. The site itself does not process bets or payments directly — it redirects visitors to third-party partner casinos via an affiliate tracking link. The domain is fully fronted by Cloudflare, uses a valid SSL certificate, and shows no direct indicators of malicious intent. The main observations of note are the use of WHOIS privacy protection (registrant identity hidden), reliance on third-party “partner casino” redirects whose own security posture is outside this report's scope, and the general risk profile inherent to gambling-adjacent affiliate sites.

2. Target Overview

Target URL: <https://www.chicken-road2.app/> (canonical form; the bare chicken-road2.app also resolves and redirects to the [www](https://www.chicken-road2.app/) subdomain).

Site Purpose: An informational and affiliate marketing page for “Chicken Road 2,” a provably-fair casino mini-game by game provider InOut Games. Page content includes game rules, RTP/volatility stats, a strategy guide, gambling disclaimers, and a call-to-action link that redirects to partner online casinos.

Site Title: “Chicken Road 2 ▷ Casino Game + Free Demo & Bonus”

3. Information Gathered

Category	Information Found	Source / Tool
Domain Information	chicken-road2.app / www.chicken-road2.app (canonical). Meta tag "index, follow" present — site permits search engine indexing.	Direct page fetch of https://www.chicken-road2.app/
WHOIS Details	Registrant/contact details are privacy-protected ("hidden") — no public registrant name, org, or contact info exposed.	Scamadviser.com domain check
IP Address	104.21.38.193 (Cloudflare-assigned anycast IP — not the true backend/origin server IP, which is masked behind Cloudflare's proxy).	Scamadviser.com domain check
DNS Records / Nameservers	autumn.ns.cloudflare.com (172.64.34.148) and denver.ns.cloudflare.com (108.162.195.196) — both Cloudflare-managed nameservers.	Scamadviser.com domain check
Hosting Provider	Cloudflare, Inc., United States — acting as reverse proxy/CDN in front of the real origin server.	Scamadviser.com domain check
SSL Certificate Information	Valid SSL certificate; Domain Validated (DV) type — verifies domain control only, not business identity; issued by Google Trust Services.	Scamadviser.com domain check
Security Headers	Not independently retrievable with the OSINT tooling available in this session (automated header scan was blocked). Recommend a manual check via securityheaders.com before finalizing a security posture judgment.	Attempted via direct fetch; limitation noted
Technologies Used	Built on Next.js (React framework — evidenced by /_next/image asset-optimization paths in page source); images served via Cloudinary CDN (res.cloudinary.com).	Direct inspection of page source
Subdomains (publicly available)	www.chicken-road2.app confirmed as the canonical/primary subdomain. No other public subdomains were discovered with the tools available this session.	Direct page fetch + Scamadviser check
robots.txt	Not independently retrievable in this session (blocked by tooling access restrictions). The page's own meta-robots tag indicates "index, follow," suggesting the operator wants full search engine visibility, which is consistent with an affiliate/marketing site. Recommend manually visiting /robots.txt to confirm.	Attempted via direct fetch; limitation noted
sitemap.xml	Not independently retrievable in this session for the same reason. Recommend manually checking /sitemap.xml.	Attempted via direct fetch; limitation noted
Other Publicly Available Information	Game provider identified as InOut Games, with verified social profiles (Facebook, Twitter/X, LinkedIn, Instagram) linked directly from the page. Site includes	Direct page fetch + Scamadviser.com

Category	Information Found	Source / Tool
	standard responsible-gambling disclaimers and links to GambleAware and GamCare. Third-party trust check (Scamadviser) rates the domain "Very Likely Safe," noting a valid SSL cert and use of an external review system, but flags a low Tranco (traffic) rank and the inherent risk category of "gambling services."	

4. Intelligence Analysis — Security Observations

4.1 Origin Server Masked by Cloudflare

The publicly resolvable IP (104.21.38.193) is a Cloudflare anycast address, not the site's true backend server. This is important because it means direct infrastructure reconnaissance (server OS, real hosting location, open ports on the origin) is not possible through DNS alone — this is a common and generally positive security practice, as it shields the origin from direct attack, but it also limits what an external OSINT investigation can determine about the backend.

4.2 WHOIS Privacy Protection Enabled

Registrant information is fully redacted. This is standard practice for most modern domain registrations and is not inherently suspicious, but it does mean ownership cannot be independently verified through WHOIS alone — attribution would require corroborating evidence (e.g. the linked InOut Games corporate profile and social accounts, which do provide some identity assurance).

4.3 Domain Validated (DV) SSL Certificate

The SSL certificate only validates domain control, not the legal identity of the organization running the site (as an Organization Validated or Extended Validation certificate would). This is now industry-standard even for legitimate businesses and is not a red flag on its own, but it means the padlock icon alone should not be treated as proof of the operator's identity.

4.4 Affiliate Redirect Model — Risk Is Downstream

The site itself does not appear to accept deposits or handle funds directly; its core call-to-action links redirect to unspecified “partner casinos” via a tracking path (/go/play). This shifts the actual financial and data-security risk to third-party casino operators that are not identified on the page and were not in scope for this investigation. Any user financial exposure would occur off this domain, at a destination the user cannot vet in advance from the information given here.

4.5 Gambling Industry Classification

Third-party trust analysis (Scamadviser) flags the site under the “gambling services” category as a general risk-awareness note — gambling sites are regulated differently by jurisdiction, and legitimacy depends heavily on which licensed operator a visitor is ultimately routed to, which this page does not disclose upfront.

4.6 No Direct Indicators of Malicious Intent Found

No phishing indicators, credential-harvesting forms, malicious redirects, or malware-serving behavior were observed on the page itself during this investigation. The site uses a legitimate CDN (Cloudflare), a legitimate image host (Cloudinary), a modern web framework (Next.js), and links to verifiable, active social media profiles for its stated operator (InOut Games).

5. Sources & References

- <https://www.chicken-road2.app/> — direct inspection of target site (page content, meta tags, page source)
- <https://www.scamadviser.com/check-website/chicken-road2.app> — domain trust check (IP, nameservers, hosting, SSL, WHOIS status, Tranco rank, trust score)
- https://twitter.com/inout_games, <https://www.linkedin.com/company/inoutgames/>, <https://www.instagram.com/inout.games/>, <https://www.facebook.com/InOutGames/> — verification of game provider's social presence

6. Recommendations

- Treat the DV SSL certificate and Cloudflare hosting as baseline hygiene, not proof of trustworthiness — neither confirms who actually operates the site.
- Before engaging further (e.g. clicking through to a partner casino), independently verify the licensing and reputation of whichever specific casino the /go/play link resolves to, since that is where real financial risk is concentrated — this page does not disclose that destination upfront.
- Complete a manual check of /robots.txt and /sitemap.xml and a live security-headers scan (e.g. via securityheaders.com) to close the gaps this session's tooling could not reach.
- For future OSINT work on similar affiliate/marketing sites, always distinguish between the site being investigated and the third-party destinations it redirects to — they carry separate risk profiles and should be assessed separately.
